

THE CUEBOX SWITCH FEATURE ALLOWS
 CONNECTED FLOUTS TO BE TURNED ON OR
 OFF BY ROTATING THE LIFT FLOATS. THE
 BALL FOLLOWS THE SLOPE OF THE FLOATS.

1 & 3 operation
 2 & 4 OFF

1 & 2 & 3 operation with OFF. This may also do
 1,3,and 4 with 2 off by turning lift 2 and lift 4

1 & 2 & 3 & 4 operation

In this arrangement there are limits as to which Flouts can be switched relative to the others. If your design needs cannot be fulfilled by this arrangement, contact Rissy to discuss other options. Specially designed lift floats called Skipper Floats can "skip" trigger floats that cannot otherwise be turned off. A "stopper" can shut off all other Flouts except one.
